Potential contribution to LEED-CI, V 1.0

Artopex Seating

Material and Resources

Credit 2.1: Construction Waste Management, 50% of waste sent to burying sites is diverted (1 point available)

The packaging is design to minimized waste. 100% of packaging is recyclable, can also be recuperated for recycling or reuse.

Credit 2.2: Construction Waste Management, 75% of waste sent to burying sites is diverted (1 point available)

The packaging is designed to minimize waste. 100% of packaging is recyclable, can also be recuperated for recycling or reuse.

Credit 3.3: Resource Reuse, 30% (1 point available)

Artopex furniture is designed with a limited lifetime warranty. The Seating comes with fitted slipcovers quickly and simply replaceable to prolong the life cycle. All parts can be easily replaced in case of damage.

Credit 4.1: Recycled content, 10% (1 point available)

Artopex Seating is fabricated with over 60% recycled content (42% post-industrial and 18% post-consumer).

Credit 4.2: Recycled content, 20% (1 point available)

Artopex Seating is fabricated with over 60% recycled content (42% post-industrial and 18% post-consumer).

Credit 5.1: Regional Materials 20% (1 point available)

Help with this point will depend on project location. The Artopex factories manufacturing the Seating are located in Laval and Sherbrooke, Quebec. All projects situated within a radius of 500 miles or 800km from the point of manufacture can be considered for this point.

Indoor Environmental Quality

Credit 4.5: Low-Emitting Materials (1 point available)

All Seating is Greenguard certified and can contribute to obtaining this point.

Innovation and Design Process

Credit 1.1 – 1.4: Innovation in Design (1- 4 points possible)

LEED innovation Credits can be achieved when a project substantially exceeds the criteria of the credit relative to its performance. Also in the case of any environmental innovation that may be demonstrated.

Credit 2: LEED accredited professional (1 point available)

One point is attributed to projects using a LEED accredited professional

Potential contribution to LEED-EB Artopex Seating

Material and Resources

Credit: 2.2 Create a Capital Plan for major retrofits or upgrades (1 point possible)

Air quality; Seating Executive/Task, Lounge/Reception and Visitor/Café is Greenguard certified.

Recycled content; Seating is manufactured with recycled materials. Depending on the type of components, the recycled content varies. The actual recycled content can be listed depending on the components. Example: the metal components have a recycled content of 60% (42% post-industrial and 18% post-consumer).

Regional manufacturing; The Artopex factories manufacturing the Seating are located in Laval and Sherbrooke, Quebec. All projects situated within a radius of 500 miles or 800km from the point of manufacture can be considered for this point.

Purchasing; sustainable products must be purchased during the time frame to score this credit.

Indoor Environmental Quality

Credit 1.5 Bring to a minimum the problems of interior air quality (1 point possible)

All Seating is Greenguard certified and can contribute to obtaining this point.

Innovation and Design Process

Credit 1.1 – 1.4: Innovation in Design (1- 4 points possible)

LEED innovation Credits can be achieved when a project substantially exceeds the criteria of the credit relative to its performance. Also in the case of any environmental innovation that may be demonstrated.

Credit 2: LEED accredited professional (1 point available)

One point is attributed to projects using a LEED accredited professional

Potential contribution to LEED-NC 2009

Artopex Seating

Material and Resources

Credit 3: Resource Reuse, 30% (1 point available)

Artopex furniture is designed with a limited lifetime warranty. The Seating comes with fitted slipcovers quickly and simply replaceable to prolong the life cycle. All parts can be easily replaced in case of damage.

Credit 4: Recycled content, 10% to 20% (1 to 2 points available)

Artopex Seating is fabricated with over 60% recycled content (42% post-industrial and 18% post-consumer).

Credit 5: Regional Materials 20% (1 point available)

Help with this point will depend on project location. The Artopex factories manufacturing the Seating are located in Laval and Sherbrooke, Quebec. All projects situated within a radius of 500 miles or 800km from the point of manufacture can be considered for this point.

Indoor Environmental Quality

Credit 3.2: Reduce problems to Indoor Air Quality (Flush Out) (1 point possible)

Using Greenguard certified Seating can contribute to the air quality and to positive results after the purging of the building.

Innovation and Design Process

Credit 1.1 – 1.4: Innovation in Design (1- 4 points possible)

LEED innovation Credits can be achieved when a project substantially exceeds the criteria of the credit relative to its performance. Also in the case of any environmental innovation that may be demonstrated.

Credit 2: LEED accredited professional (1 point available)

One point is attributed to projects using a LEED accredited professional
