

## Seating Component

# MECHANISM #61S

### Type

- » Mechanism for executive seating, centered pivot with synchro back/seat angle adjustment.
- » Heavy-duty steel.

### Functions

- » 360° swivel on column axis.
- A** » Height adjustable (gas cylinder).
- B** » Tilt lock in 5 positions.
- » Synchro tilt of seat from 2° to 8° (center pivot) and of back from 90° to 114°.
- » Automatically adjusting the tilt tension depending on the weight of the user.
- » Compatible with optional lumbar support (L)
- C** » Seat depth adjusting.

### Adjustment Procedure

- » Using the **A** lever for seat height adjustment, position the chair to feel slightly elevated. Then activate the lever again to lower the chair position until your legs form a 90° angle at the knee height.
- » Using the **B** lever for tilt adjustment, set the desired synchronized seat/back angle. A 3° rearward angle seat position is recommended.
- » Using the **C** lever for depth of the seat adjustment, adjust the seat depth leaving the thickness of two fingers between the seat and the knee.
- » Position yourself next to your work surface and adjust the armrests so that your arms are closest to your body, forming an angle of 90° at elbow height.
- » If your work surface is not the right height for you, please check if adjustment is possible. If you are positioned too low when using the surface and you must increase your chair height, you will probably need a footrest to keep the recommended 90° leg angle.
